

# Preconstruction Surveys

## Collating information for Preconstruction Surveys?

How can MGISS's solutions help you?

Reduce Risk

Spot potential problems early.

Save Money

Save time and manpower on site.

Improve Accuracy

Improve the accuracy of your measurements and GIS records.

Increase Efficiency

Obtain accurate measurements and sync data while in the field to increase efficiency.

Survey Grade

Topografi-M delivers between decimetre and centimetre positioning accuracy.

Grafi Spatial Hub

Sync data via the internet to the cloud in the Grafi Spatial Hub.

Do you need to gather a large amount of information for Preconstruction Surveys? How do you go about productively collating those details?

The 2015 Construction Regulations require that construction clients provide pre-construction information to every contractor appointed to the project. The regulations define pre-construction information as including details about: the project, the planning and management of the project, access for plant and any health and safety hazards. Consequently, this could mean environmental surveys, structural surveys and overhead and underground services surveys amongst others.

MGISS recommends this solution for civil engineers and contractors. For example TopoGrafi-M software running on the Panasonic Toughpad or the Trimble Juno 5 combined with GNSS receivers such as the Spectra Precision SP60, SP80 or the Trimble R2 would be ideal for civil engineers and contractors needing to capture field data thereby reducing inefficiency and improving productivity.
