

Estate Management

How GeoGرافي-M can help you show information on your various assets.

How can MGISS's solutions help you?

Reduce Risk

Spot potential problems early.

Save Money

Save time and manpower on site

Improve Accuracy

Improve the accuracy of your measurements and link to laser rangefinders.

Increase Efficiency

Obtain accurate measurements and sync data while in the field to increase efficiency.

Mapping Grade

Geografi-M delivers between submetre and decimetre positioning accuracy.

Gرافي Spatial Hub

Sync data via the internet to the cloud in the Gرافي Spatial Hub.

GeoGrafi-M can help you to manage your land more effectively by not only mapping your land, but showing information on your various assets.

Geografi-M runs on Windows Mobile and Android. It can work with any mapping grade GNSS receiver and laser rangefinders. It is capable of delivering between submetre and decimetre positioning accuracy in real-time onto your digital OS map along with all other attributes such as tenancies, ownerships, properties, trees and landscape, utilities and rights of way.

MGISS recommends this solution for Estate Managers. For example GeoGrafi-M software running on the Panasonic Toughpad or a Mobile Mapper 50 combined with the Arrow GNSS series or the Trimble R1 would be ideal for Estate Managers needing to oversee their assets thereby reducing inaccuracy and improving productivity.

How it works...
